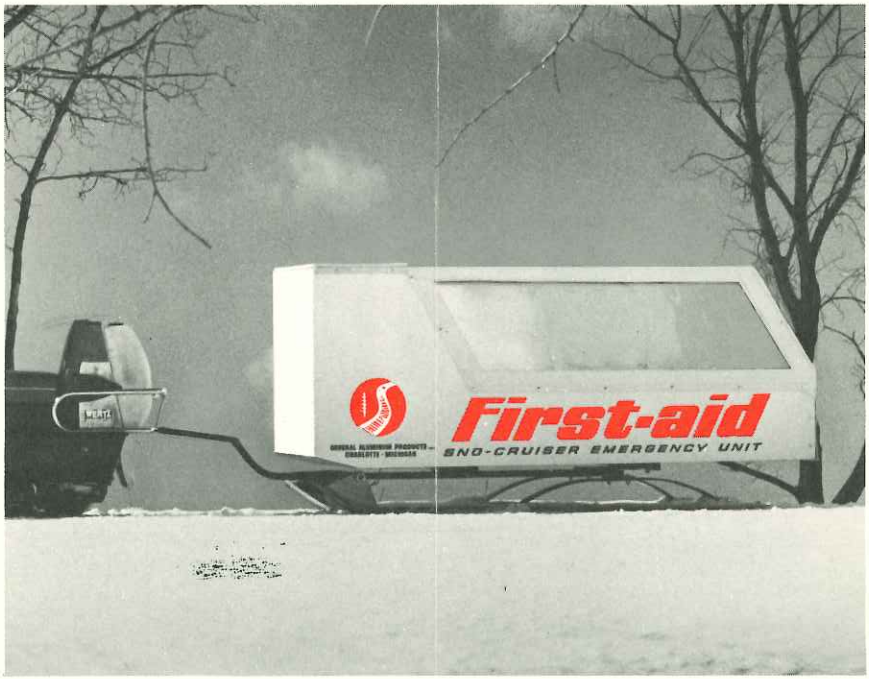
Introducing the new Sno-Cruiser emergency rescue unit.



296/19

Of special importance to ski and snowmobile clubs and resort areas... snowmobile race groups...ambulance services...fire and police...hospitals.

In response to many requests, nationwide, for a rugged, safe, dependable portable stretcher-sled that will get quickly into and out of remote snowbound areas, General Aluminum Products, maker of Sno-Cruiser and Sno-Camper, introduces the Emergency Rescue Unit.

This sled is a must for snowmobile and ski clubs and areas, cross country snowmobile race sponsors, resorts. Also a perfect vehicle for ambulance services, morticians, hospitals, police and fire departments . . . for any organization that must get into a site inaccessible by car or ambulance, and more importantly, get back out again rapidly and safely.

The Sno-Cruiser Emergency Rescue Unit is basically a portable stretcher that attaches to any snowmobile, tows within the track of the snowmobile, and will go anywhere a snowmobile will go, even into deep snow and thick woods. It is a vital safety requirement especially where inexperienced skiers or snowmobilers are involved in backwoods country.

The Unit is ruggedly built of highest quality materials, superbly designed for this one particular use. It has a folding hospital wheeled stretcher, which locks into position when in use. A six foot man can lie full length, and the sled is fully sprung to provide a comfortable ride— very important in cases of fracture.

The Care-Free universal 360° hitch fits any snowmobile, provides complete freedom of movement between sled and machine and won't permit the sled to upset even if the towing machine does. It is completely covered by a windowed zip top, with a marine plywood covering on the front to protect the head of the injured person while in transport. A built-in 24 x 14 x 6 inch first aid kit box provides medical supply storage. The unit is sold only in white, with a large FIRST AID on each side, for quick identification as a rescue sled.

Because of the limited market for this sled, the Emergency Unit will be sold on a custom-built basis, with an approximate three- to four-week delivery time. The sled carries a full factory warranty.

List price ~~$350.00~~ 325.00 FOB, including professional wheeled stretcher. Crating charge $10.00 additional. FOB point: Charlotte, Michigan.

For safety's sake, order your Sno-Cruiser Emergency Rescue Unit today. 50% down payment must accompany C.O.D. orders, or enclose payment in full and save C.O.D. charges.
